

SAURAV BHOJAK

Python Developer | Django | Flask | FastAPI | REST APIs | AWS | Docker
sauravbhojak6156@gmail.com | +91 9328199796 | Ahmedabad, India | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Python Developer with 2.5+ years of experience building scalable REST APIs, microservices, and ETL data pipelines. Proficient in Django, Django REST Framework (DRF), Flask, and FastAPI with strong expertise in PostgreSQL, MySQL, MongoDB, Redis, and Celery for async task processing. Hands-on experience with AWS (RDS, S3, Lambda, EC2), Docker, Gunicorn, and Uvicorn for production deployments. Actively leverage AI coding tools (Cursor, GitHub Copilot, OpenAI Codex, Antigravity) to accelerate development and reduce delivery time. Delivered production systems across VPN infrastructure, HRMS, healthcare data engineering, and AI-powered applications.

TECHNICAL SKILLS

Programming Languages: Python 3 (asyncio, multithreading, OOP) | JavaScript | HTML5 | CSS3 | AJAX

Backend Frameworks: Django | Django REST Framework (DRF) | Flask | FastAPI

Async & Task Queues: Celery | Celery Beat (scheduler) | Redis (broker & cache)

Databases: PostgreSQL | MySQL | MariaDB | MongoDB | Redis | MSSQL

Cloud & DevOps: AWS (RDS, S3, Lambda, EC2, Boto3) | Docker | GitLab CI/CD | Jenkins | Linux

AI Tools: Cursor IDE | GitHub Copilot | OpenAI Codex | Antigravity | Claude Code

API & Integration: REST API Design | JWT Authentication | SSO | OAuth2 | WebSockets

Data & ETL: ETL Pipelines | Data Migration | PHI/PII Masking | OLAP | Star Schema | Pandas

Tools & Servers: Git | Postman | VS Code | PyCharm | Gunicorn | Uvicorn | Nginx | pytest

Other: Web Scraping (BeautifulSoup, Selenium, Scrapy) | Automation | RBAC

PROFESSIONAL EXPERIENCE

Python Developer

Upsquare Technologies | Ahmedabad, Gujarat

Jan 2023 – Present

- Designed and developed 20+ REST APIs using Django and DRF for a project management system with real-time task tracking and role-based access control for 50+ users.
- Built end-to-end HRMS REST APIs for attendance, payroll, and leave management — automating payroll calculations and reducing manual HR processing time by ~40%.
- Implemented Celery beat scheduler with Redis to automate payroll processing and attendance jobs on a scheduled basis, replacing manual triggers entirely.
- Developed FastAPI backend for a VPN application integrating 6+ external systems; used Celery + Redis for async server monitoring and log processing jobs.
- Designed and maintained 5 production databases (MySQL, PostgreSQL, MariaDB, MongoDB, Redis) with optimised schemas for high-availability concurrent workloads.
- Built FastAPI backend for AI tattoo generation app integrating third-party AI APIs; deployed image processing as AWS Lambda functions via API Gateway for scalable serverless execution.
- Engineered healthcare ETL pipeline migrating millions of patient records from MSSQL to AWS RDS (EC2, S3, Lambda); applied PHI/PII masking and star schema transformation for OLAP analytics.
- Deployed and managed production services using Docker, Gunicorn, and Uvicorn; used GitLab CI/CD and Jenkins for automated testing and deployments.
- Leveraged AI coding tools (Cursor, Copilot, OpenAI Codex, Antigravity, Claude Code) to accelerate API development, auto-generate tests, and speed up code reviews.

Freelance Python Developer – Web Scraping

Self-Employed | Ahmedabad, Gujarat

Feb 2022 – Dec 2022

- Developed custom web scraping solutions using Python (BeautifulSoup, Requests, Selenium) for multiple clients, delivering structured data exports in CSV and JSON formats.
- Built proxy rotation and request throttling modules to maintain scraping reliability at scale, reducing IP bans by ~80%.

KEY PROJECTS

1. VPN Management Platform

Technologies: Python, FastAPI, Django, MySQL, Redis, Celery, asyncio, MongoDB, Docker

- Built FastAPI backend integrating VPN data with 6+ external applications for real-time data exchange and reporting.
- Implemented Celery + Redis async task queue for server monitoring jobs — tracking health, user IPs, sessions, and connection quality without blocking API responses.
- Developed Django admin dashboard with interactive analytics charts for live visibility into server uptime and VPN usage metrics.
- Containerised all services with Docker for consistent local development and production deployment.

2. HR Management System (HRMS)

Technologies: Python, Django, DRF, PostgreSQL, Celery, Redis, Docker

- Built REST APIs for attendance, payroll, and leave management serving 100+ employees — replacing a fully manual process.
- Implemented Celery beat scheduler for automated payroll processing with configurable rules for tax, deductions, and bonuses.
- Used DRF serializers and viewsets for clean, testable, and maintainable API architecture.
- Deployed using Docker and Gunicorn for production-ready containerised hosting.

3. AI Tattoo Generation Backend

Technologies: Python, FastAPI, Gunicorn, Uvicorn, MySQL, SSO, AWS Lambda, Docker

- Built high-performance FastAPI backend (served via Uvicorn + Gunicorn) integrating third-party AI APIs to generate custom tattoo designs on demand.
- Deployed image processing jobs as AWS Lambda functions triggered via API Gateway, enabling scalable serverless execution.
- Implemented SSO authentication and multithreading, achieving ~3x improvement in concurrent request handling.
- Containerised the full backend stack using Docker for reproducible deployments across environments.

4. Healthcare Data Migration & OLAP Pipeline

Technologies: Python, Django, PostgreSQL, MSSQL, AWS RDS, AWS S3, AWS Lambda, AWS EC2, Boto3, ETL

- Designed and executed full data migration pipeline moving millions of medical records from on-premise MSSQL to AWS RDS, deployed on EC2, with zero data loss.
- Used AWS Lambda functions to trigger and orchestrate ETL steps automatically, and stored all processed exports and logs on AWS S3 via Boto3.
- Built ETL scripts transforming raw medical data into star schema (patients, medications, encounters) for downstream OLAP analytics.
- Applied PHI/PII masking and anonymisation across all sensitive fields for HIPAA-aligned data security.
- Performed large-scale data validation and cleaning ensuring high accuracy and consistency across millions of records.

EDUCATION

Diploma in Information Technology

Government Polytechnic, Himmatnagar | CGPA: 8.0

Jun 2015 – Jul 2018

Python and Django Framework – Certification Course

Tops Technology, Ahmedabad

Jan 2021 – Dec 2021

Capstone: Built full-stack e-learning platform with role-based access (student, teacher, admin), course purchase flow, and content management system.
